

MORIN FAGBODUN

3177427905 | morinfagbodun@gmail.com | [LinkedIn](#)

Objective

Third-year Software Engineering student with internship experience building full stack and back-end solutions using TypeScript, Node.js, Python, and AWS. Skilled in designing scalable systems, automating workflows, and integrating AI-driven capabilities, including vector embeddings and CI/CD pipelines. Seeking a Fall 2026 Software Engineer Intern role to contribute to AI-native projects and enhance product features.

Education

Rochester Institute of Technology

Bachelor of Science, Software Engineering, Legal Studies Minor

May 2028

Rochester, NY

- **Coursework:** Engineering of Software Subsystems, Web Engineering, Software Design of Computing Systems, Law and Society

Skills

- **Languages & Frameworks:** Python, Java, JavaScript, TypeScript, C/C++, React, SQL, Vue, Angular, Node, Spring Boot
- **Cloud & Databases:** AWS, MongoDB, PostgreSQL
- **Tools:** Postman, Git/Github, AI/LLM's, CI/CD, Datadog, Trello, Jira, OpenAI, Docker
- **AI & Machine Learning:** Machine Learning, Large Language Models (LLMs), Embeddings

Work History

AWS Global University Program

AWS Student Builder Campus Leader

Rochester NY • **Jan 2026 - Dec 2026**

- Driving 500+ AWS Builder Center signups through peer outreach, events, and campus initiatives
- Creating 24+ pieces of technical and promotional content across social platforms using AI/LLMs to increase AWS awareness
- Facilitated hands-on AWS demos and machine learning workshops introducing students to cloud services such as EC2, S3, and Lambda
- Hosted 4 campus tabling events and delivered 10+ classroom announcements to promote AWS programs

Liberty Mutual Insurance

Tech Start Summer Intern

Indianapolis, IN • **May 2025 - Aug 2026**

- Built a Docker-based document migration microservice using Node.js, AWS, and MongoDB, significantly improving business observability and large scale data ingestion.
- Automated JSON schema generation with TypeScript, Angular, and CI/CD pipelines by mapping collection attributes via metadata parsing, reducing generation time from 5 minutes to 1 second.

Tech Start Fall Intern

Indianapolis, IN • **Aug 2025 - Jan 2026**

- Engineered MongoDB databases to store migration metadata and implemented vector embeddings for vector search, reducing business inquiry response time by 5-7 days.
- Integrated AI-enabled analytics and machine learning using the MongoDB Model Context Protocol (MCP) to support natural-language queries and data analysis.
- Implemented AWS SQS for asynchronous vector embedding and data transfer, ensuring high-throughput migration performance.
- Created Datadog dashboards and integrated AWS SNS and Datadog alarms to monitor and send alerts on critical application errors 10% faster.
- Delivered biweekly production releases in Agile team using CI/CD pipelines and Git best practices.

Software Projects

Content Planner

- Assembled a full-stack content scheduling platform with a React front end, Python Flask RESTful API, and PostgreSQL database supporting 5–10 active testers
- Implemented automated posting workflows in Python, reducing manual effort by 35% and covered with unit tests in a CI/CD pipeline
- Designed using React, Python, and PostgreSQL

Donation Website

- Developed a web-based food bank management system enabling users to view and donate to posted needs.
- Constructed a role-based admin interface using Angular and Java Spring Boot to securely manage 20+ inventory items and user requests
- Bolstered Agile development as Scrum Master by coordinating sprint planning, tracking progress in Jira, and iterating on REST API enhancements

Leadership & Engagement

Velocity Urban Dance Crew

Captain | Co-President

May 2026 - May 2027

National Society of Black Engineers

Programs Chair

May 2024 - May 2025
